Quadruple cut-out structure

#### Oak beam

Simple oak beam oak beam with

soles

oak beam with wooden or concrete raised

oak beam with wooden or concrete raised with soles

oak beam with cradles

oak beam with wheels

# BARREL USER **ADVICE**

## **COMMISSIONING & MAINTENANCE** OF BARRELS

Fill the barrel with approx. 5 Gal. of hot (around 104F) filtered, chlorine-free water.

Roll the barrel. Turn the barrel to wash both heads. The water must touch all internal surfaces.

Leave on each head for one hour.

Remove bung and drain.

If a leak appears, fill the barrel full of water and leave until the leak is plugged. Caution: Do not leave the barrel full of water for longer than 24h. Empty the barrel and rinse with fresh water before leaving to drain.

## PROLONGED STORAGE OF NEW BARRELS

Store barrels in an environment conforming to the following specifications

As a general rule, to maintain barrel quality, we recommend storing empty barrels in a cool, humid environment, away from sunlight and contact with air.
