

Rotating Dumping Stand

FOR OAK FERMENTATION TANKS

Tonnellerie
ROUSSEAU

A system that greatly facilitates emptying ferments with a rotating forklift bracket.

Brand new development from Tonnellerie Rousseau : **new integrated stands on oak fermenters that can be dumped with a rotating forklift.**

The support of the oak tank has an integrated bracket with fork pockets that allow for easy emptying of ferments to facilitate draining and pressing.

This stand and support are available for oak tanks up to 1 ton in volume (12-13HL). It can be handled full with

a standard 2 T electric forklift and standard length forks.

Its oak stand allows the tank to be unloaded and installed safely and provides good stability on the ground during vinification.

The stand facilitates the movement of empty or full tank with a pallet truck or forklift.

Developed in collaboration with Herve BIZEUL - Clos des Fées

ADVANTAGES

PRESERVATION OF MUST QUALITY:

by emptying the tank by dumping directly from the tank, we are minimizing the manipulation of the must, allowing for the highest quality grape material to be put directly into the press.

FACILITY OF EMPTYING:

it is no longer necessary to enter the tank to empty the fermenter with a shovel or bucket.

HUGE SAVINGS OF TIME DURING CRUSH

SAVINGS OF LABOR, as the tank can now be emptied by one cellar hand

SAFER: by avoiding entering the tank, there is no longer a risk of CO₂ for the person emptying the fermenter

EASY CLEANING: the tank can now be cleaned and sprayed out while inverted, saving time, resources, and energy

CUSTOMIZATION OF ACCESSORIES
